Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALTERNATIVE PRODUCTS: 2 isoforms; A (shown here) and B; are produced by alternative initiation. A third isoform: C is Produced by alternative splicing.

TISSUE SPECIFICITY: IN THE EMBRYO, EXPRESSED AT HIGH LEVELS IN THE DEVELOPING BRAIN AND NEURAL TUBE. IN ADULT, HIGHLY EXPRESSED IN THE BRAIN WITH VERY LOW LEVELS FOUND IN TESTIS, HEART AND THYMUS. ISOFORM C IS EXPRESSED ONLY IN THE EMBRYO.

EXPRESSED DURING MID GESTATION. LEVELS DECREASE IN LATE GESTATION AND REMAIN AT THIS LEVEL IN THE ADULT.

AND REMAIN AT THIS LEVEL IN THE ADULT.

Watterson D.M., Schavocky J.P., Guo L., Weiss C., Chlenski A., Shrinsky V.P., Van Eldik L.J., Haiech J.; Shrinsky V.P., Van Eldik L.J., Haiech J.; and the kinase-related protein gene found at human chromosome 3q21 in a multi-gene cluster: organization, expression, alternative splicing and nolumorphic marker."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Watterson M.D.;

Submitted (NOV-1995) to the EMBL/GenBank/DDBJ databases.

Submitted (NOV-1995) to the EMBL/GenBank/DDBJ databases.

FUNCTION: CALCIUM/CALMODULIN-DEPENDENT ENZYME RESPONSIBLE FOR SUBMITTED.

IN THE N-TERMINUS OF MYOSIN LIGHT CHAINS (MLC.) AN EVERT THAT IN THE N-TERMINUS OF MYOSIN LIGHT CHAINS (MLC.) AN EVERT THAT FACILITATES MYOSIN INTERACTION WITH ACTIN FILAMENTS. CENTRAL DETERMINANT IN THE DEVELOPMENT OF VASCULAR PERMEABILITY AND TISSUE DEDMA FORMATION. IN THE NERVOUS SYSTEM IT HAS BEEN SHOWN TO CONTROL THE GROWTH INTIATION OF ASTROCYTIC PROCESSES IN CULTURE AND TO PARTICIPATE IN TRANSMITTER RELEASE AT SYNAPSES FORMED BETWEEN CULTURED SYMPATHETIC GANGLION CELLS. CRITICAL PARTICIPANT IN SIGNALING SEQUENCES THAT RESULT IN FIBROBLAST APOPTOSIS.

-1- CATALYTIC ACTIVITY: ATP + [myosin light-chain] = ADP + [myosin light-chain]
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         splicing and polymorphic marker.";

FISSUE SPECIFICITY: SMOOTH MUSCLE AND NON-MUSCLE ISOZYMES ARE
EXPRESSED IN A WIDE VARIETY OF ADULT AND FETAL TISSUES AND IN
RETHER TISSUE- NOR DEVELOPMENT-SPECIFIC. NON-MUSCLE ISOFORM 2 IS
FIRE DOMINANT SPLICE VARIANT EXPRESSED IN VARIOUS TISSUES. TELOKIN
HAS BEEN FOUND IN A WIDE VARIETY OF ADULT AND FETAL TISSUES.
HAS BEEN FOUND IN A WIDE VARIETY OF ADULT AND FETAL TISSUES.
SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
SIMILARITY: CONTAINS 1 FIBRONECTIN TYPE III-LIKE C2-TYPE DOMAIN.
SIMILARITY: CONTAINS 1 FIBRONECTIN TYPE III-LIKE DOMAIN.

```

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Comment: Advanced glycosylation end products are heterogeneous nonenzymatically gly c;Comment: function, thus contributing to tissue lesions in diabetes.
C;Comment: This receptor appears also to mediate the effects of amyloid beta peptide ates in the neurotoxic pathway that produces dementia in Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           nterpart of mouse mammary tumor gene int-3.
